

Doctoral Evidence and Upload Guide

Practical checklist for making the portfolio look real, verifiable, and reviewer-friendly

Prepared for	Applicant preparation and website download mapping
Applicant	Roberto Ocaviantyo Tahta Laksmana
Positioning	Evidence-first portfolio quality control
Document date	May 2026

This guide is designed to prevent the portfolio from looking artificial: every claim should connect to a file, repository, certificate, report, dataset note, or limitation statement.

Required evidence files

File type	What to include	Why it matters
CV or academic resume	Education period, certificates with issue dates, public profile links, GitHub/LinkedIn, project list.	Shows chronological credibility and reviewer-friendly verification.
Project report PDFs	One PDF per project with problem, dataset, method, results, limitations, and reproducibility.	Prevents the portfolio from looking like a landing page only.
Dataset guide	Dataset source, fields, assumptions, cleaning steps, limitations, and privacy note.	Shows data discipline and avoids vague AI claims.
Notebook summary	Notebook structure, package versions, commands, outputs, and seed/config notes.	Shows reproducibility even if raw notebooks are not uploaded.
GitHub/demo links	Public repositories with README, screenshots, license, and installation/run notes.	Lets reviewer inspect evidence directly.

Do not include

Do not include fake publications, fake professor approval, private credential IDs on public pages, private evidence links without passkey protection, or claims that the website is an official university page. Strong portfolios look honest, not exaggerated.

Suggested file naming

Level	Recommended names
S2 / Master	ETH_Master_Admission_Portfolio_REALISTIC_STRONG.pdf, Master_Thesis_Proposal.pdf, Project_Evidence_Matrix.pdf
S3 / PhD	MIT_Doctoral_Research_Portfolio_REALISTIC_STRONG.pdf, Doctoral_Research_Proposal.pdf, Publication_Roadmap.pdf
